TAB WRAPPER
CYCLONE

THE ROTATION THAT KEEPS YOUR PRODUCT SAFE

WHAT IS THE TAB WRAPPER CYCLONE MODEL?

The TAB Wrapper Cyclone is a semi-automatic stretch wrapper built for demanding warehouse and industrial environments. Designed to handle loads up to 4,000 lbs with precision and speed, this American-built turntable wrapper delivers consistent, professional-grade load containment every time.

AVAILABLE IN ONE MODEL:

TAB-CYCLONE

- 50” x 50” x 98” max load | 4,000 lb capacity

WHY CHOOSE THE CYCLONE?

Eliminate Hand Wrapping & Banding:

Inconsistent hand wrapping wastes film, time, and labor. The Cyclone automates the process with two wrap modes, spiral up & down or spiral up only, and film stretch adjustable from 20% to 150%, so every load gets exactly the right amount of film.

Handle Your Heaviest Loads:

With a 4,000 lb capacity, the Cyclone is built to handle your largest, heaviest palletized products without slowing you down.

Wrap Up to 20 Loads Per Hour:

With variable turntable speeds up to 12 RPM, the Cyclone keeps your operation moving. The integrated photo eye sensor reads loads 24” and taller, enabling true operator walk-away and freeing your team for higher-value work.

Protect Every Load:

The touchscreen control panel lets you dial in adjustable wrap parameters for consistent load containment every cycle. Compatible with clear and select colored films, with an optional color-sensitive photo eye for dark films, the Cyclone adapts to your product, not the other way around.

PERFECT FOR:

- Heavy palletized loads
- High-volume warehouses
- Distribution centers
- Manufacturing facilities
- Large industrial products
